

Sprint 5 Planning

We aim on delivering an almost final version of our product. The Danfoss Demo is going to take place at the end of this Sprint, and we want more than the MVP to be ready by then. We plan on making the Data Visualization with showing the end result and maybe the initial data given in, boiler customization and choosing which one to run for the optimization and a few more smaller things. All members were present on the meeting, and issues have been distributed among us.
