

Sprint 4 Planning

The team's aim for this sprint is to try and make the final product, since we only have about 4-5 weeks before having to present it in front of the other students and teachers. This means updating the optimizer, and the UI. We also plan on adding graphs which show the given data, in various configurations. We also plan to fix the bug with the Source Data Manager. Two team members were missing during the Sprint 4 Planning Meeting, but we talked about our goals previously and they will be informed of everything discussed through online matters.
