

## RazorPageModel

+ GetBinder(context: ModelBinderProviderContext): IModelBinder

DoubleModelBinderProvider

- <<readonly>> \_context: SourceDataDbContext

+ heatDemandData: DbSet<HeatDemandDataModel>

+ <<create>> RazorPageModel(context: SourceDataDbContext)

+ OnGet(): void

+ OnPost(): void

This custom binder allows input of numbers that use eithera comma or a dot as a decimal point for unit configuration

This is the template that almost every razor page in the program follows. Pages that are of minimal functionality or that do not deviate from this template substantially have been omitted in the class diagram.
